

Empower your team with engaging training.

Value Stream Engineering's training programs help maximize the effectiveness and impact of your organization's greatest resource—the members of your team.

Invest in your team.

In order to build game changing products, you need a game changing team. Value Stream Engineering's training programs empower your employees to be more effective by improving their technology and leadership skills.

Numerous studies show that by investing in training programs, organizations see an increase in both job satisfaction as well as the output of their teams. This is especially applicable to technology focused organizations full of naturally curious problem solvers.

The most effective training programs are created and led by those with real-life experiences regarding the topic at hand. At VSE, our team brings over five decades of combined development expertise, operating at multiple management levels including Chief Technology Officer.

Skills that activate change.

Our experienced team of technology leaders provide learning opportunities completely customized to your organization's greatest needs and your employees' current knowledge level.

Not only are we passionate about the topics at hand, but we're outcome obsessed. We'll work with you to identify KPIs upfront so we can ensure your training helps your team deliver real results like:

- Reduction in production incidents
- Lower production defect rates
- Faster deployments

If you are ready to learn how Value Stream Engineering's expert-led training and coaching programs can impact your entire enterprise and accelerate your software development goals, contact us today.
